

Amendments to the Specification:

Please replace paragraph [0002] with the following paragraph:

Due to overlaying intelligent networks over common-used circuit switching networks, not only can we make common calls, but also we can get other intelligent services through dialing different Service Access [[Code]] Codes. At present, widely-used intelligent network services include [[, such as,]] Freephone, Account card calling (ACC), Virtual private network (VPN), Universal Personal Telecommunication (UPT), Wide Area Centrex (WAC), Televoting (VOT) and Mass Calling (MAS) Service and so on.
